```
The invention relates to a pharmaceutical agent delivery composition comprising a transport polymer comprising a linear or branched peptide having about 1 to to 300 anino acid residues, having about 5 to 100% thatidine residues, and optionally having 1 to 95% non-histidine residues, at least one pharmaceutical agent and optionally one or more intracellular delivery components in association with the transport collymer. The pharmaceutical agent delivery composition is useful for a tollywering a pharmaceutical agent delivery composition is useful for delivering a pharmaceutical agent to the interior of a cell and is useful for used in gene therapy for treating adenosine deaminase deficiency, purine concleoside phosphorylase deficiency, chronic granulomatous disease with defective p47phox, sickle cell with HBS, beta-thalassaemia due to inadequate production of beta-haemoglobin, familial hypercholesterolaemia con a defective low-density lipoprotein receptor, phonylactonine deficiency, alphal-antitrypsin deficiency, ornithine transcarbamylase deficiency, Paconi's anaemia, apolipoprotein E deficiency, haemophila A and B due to factor VIII and IX deficiency, cornithine transcarbamylase deficiency, retinitis pigmentosa, lysosomal storage tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage cursuina, cystic fibrosis due to CFTR mutations, Parkinson due to tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage cinfection, acquired anaemia, cardiac and peripheral vascular disease infection, acquired anaemia, cardiac and peripheral vascular disease, virus and arthritis. The present peptide sequence is histidine copolymer.
                                                                                                                                              Pharmaceutical composition useful for delivering therapeutic agent for treating diseases, comprises a peptide characterized with specified number of amino acids and a specified percentage of histidine residues
                                                                                                                                                                                                                                                                                  Claim 3; Page 36; 64pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (first entry)

the invention transport polymer comprising a linear or branched peptide

Comprising a transport polymer comprising a linear or branched peptide

Comprising a transport polymer comprising a linear or branched peptide

Confistidine residues, and optionally having it of 9% non-histidine

cresidues, at least one pharmaceutical agent and optionally one or more

intracellular delivery components in association with the transport

Conjumer. The pharmaceutical agent delivery composition is useful for

closed in gene therapy for treating adenosine deaminase deficiency, purine

cused in gene therapy for treating adenosine deaminase deficiency, purine

cused in gene therapy for treating adenosine deaminase deficiency, purine

cused in gene therapy for treating adenosine deaminase deficiency, purine

cused in gene therapy for treating adenosine deaminase deficiency, purine

cused in gene to peta-haemoglobin, familial hypercholesterolaemia

continue production of beta-haemoglobin, familial hypercholesterolaemia

continue adefective low-density lipoprotein receptor, phenylketouria due

contituine transcarbamylase deficiency, alphal-antitrypsin deficiency,

confitchine transcarbamylase deficiency, alphal-antitrypsin deficiency,

confitchine transcarbamylase deficiency, recentis anaemia, apolipoprotein

confitchine transcarbamylase deficiency, retinitis pignentosa, lysosomal storage

context on a servedly perceptor of the partine pignentosa, lysosomal storage

confitchine transcarbamylase deficiency, retinitis pignentosa, lysosomal storage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disease (i.e., mycopolysacchari, type 1, Hunter, Hurler and Gaucher), disbetic retinopathy, human immunodeficiency virus disease, virus infection, acquired anaemia, cardiac and peripheral vascular disease and arthritis. The present peptide sequence is H-K2b polymer.
                                                                                                                                                                                                                                                                                                                                             Pharmaceutical composition useful for delivering therapeutic agent for treating diseases, comprises a peptide characterized with specified number of amino acids and a specified percentage of histidine residues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              invention relates to a pharmaceutical agent delivery composition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 168.5; DB 22; Length 39;

```
comprising a transport bolymer comprising a linear or branched populate having about 10 to 300 amino acid residues, having about 5 to 100% institution and optionally having about 5 to 100% thistidine residues, at least one pharmaceutical agent and optionally one or more intracellular delivery components in association with the transport polymer. The pharmaceutical agent delivery composition is useful for delivering a pharmaceutical agent to the interior of a cell and is used in gene therapy for treating adenosine deaminase deficiency, purine uncleoside phosphorylase deficiency, chronic granulomatous disease with defective payphox, sickle cell with HbS, beta-thalassaemia due to inadequate production of beta-haemoglobin, familial hypercholesterolaemia cut a defective low-density lipoprotein receptor, phenyletronuira due to phenylalanine hydroxylase deficiency, raconi's anaemia, apolipoprotein confithine transcarbamylase deficiency, raconi's anaemia, apolipoprotein mucaular dystrophy due to dystrophin, laminin-2, or sacroglycans mutations, cystic fibrosis due to CFTR mutations, Parkinson due to typosine hydroxylase deficiency, retinitis pignmentosa, lysosomal storage deficiency, retinitis pignmentosa, lysosomal storage typosine hydroxylase deficiency, retinitis pignmentosa, lysosomal storage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

Pharmaceutical composition useful for delivering therapeutic agent for treating diseases, comprises a peptide characterized with specified number of amino acids and a specified percentage of histidine residues

WPI; 2001-425579/45.

Mixson AJ;

Example; Page 23; 64pp; English.

```
The inversion relates to a pharmaceutical agent using the function comparising a transport bolymar comprising a linear or branched peptide having about 10 to 300 amino acid residues, having about 5 to 100% institution residues, and optionally having 1 to 95% anon-histidine residues, and optionally having about 5 to 100% intracellular delivery components in association with the transport or polymer. The pharmaceutical agent delivery composition is useful for delivering a pharmaceutical agent delivery composition is useful for delivering a pharmaceutical agent to the interior of a cell and is used in gene therapy for treating adenosine deaminase deficiency, purine uncleoside phosphorylase deficiency, chronic granulomatous disease with defective py7phox, sickle cell with HbS, beta-thalassaemia due to inadequate production of beta-haemoglobin, familial hypercholesterolaemia continue transcarbamylase deficiency, alphal-antitrypsin deficiency, crnithine transcarbamylase deficiency, Paconi's anaemia, apolipoprotein wiscular dystrophy due to dystrophin, laminin-2, or sacroglycans mutations, cystic fibrosis due to CPTR mutations, Parkinson due to tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage cire, mycopolypaccharide type 1, Hunter, Hurler and Gaucher), diabetic retinopathy, human immunodeficiency virus disease, virus infection, acquired anaemia, cardiac and peripheral vascular disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a pharmaceutical agent delivery composition

Pharmaceutical composition useful for delivering therapeutic agent for treating diseases, comprises a peptide characterized with specified number of amino acids and a specified percentage of histidine residues

Claim 3; Page 36; 64pp; English.

The invention relates to a pharmaceutical agent delivery composition comprising a transport polymer comprising a linear or branched peptide comprising about 10 to 300 amino acid residues, having about 5 to 100% considered and parting about 5 to 100% and optionally having 1 to 95% non-histidine residues, and optionally having 1 to 95% non-histidine credidues, at least one pharmaceutical agent and optionally one or more intracellular delivery components in association with the transport collymer. The pharmaceutical agent delivery composition is useful for delivering a pharmaceutical agent delivery composition is useful for used in gene therapy for treating adenosine deaminase deficiency, purine undecaside phosphorylase deficiency, chronic granulomatous disease with defective p47phox, sickle cell with HBS, beta-thalassaema due to inadequate production of beta-haemoglobin, familial hypercholesterolaemia con the defective p47phox, sickle cell with HBS, beta-thalassaema disease with the transcarbamylase deficiency, Paconi's anaemia, apolipoprotein contribine transcarbamylase deficiency, Paconi's anaemia, apolipoprotein muscular dystrophy due to dystrophin, lamini-2, or sacroglycans customations, cystic fibrosis due to CFTR mutations, Parkinson due to tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage contentions, cystic fibrosis due to CFTR mutations, Parkinson due to tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage confibency in munodofficiency virus disease, virus infection, acquired anaemia, cardiac and peripheral vascular disease confibency membritis. The present peptide sequence is histidine copolymer. H-K 19-mer

Pharmaceutical composition useful for delivering therapeutic agent for treating diseases, comprises a peptide characterized with specified number of amino acids and a specified percentage of histidine residues

Example, Page 23; 64pp; English.

The invention relates to a pharmaceutical agent delivery composition comprising a transport polymer comprising a linear or branched peptide comprising a transport polymer comprising a linear or branched peptide having about 10 to 300 amino acid residues, having about 5 to 100% comprising a taleast one pharmaceutical agent and optionally one or more intracellular delivery components in association with the transport complying a pharmaceutical agent delivery composition is useful for delivering a pharmaceutical agent delivery composition is useful for cased in gene therapy for treating adenosine deaminase deficiency, purine used in gene therapy for treating adenosine deaminase deficiency, purine cused in gene therapy for treating adenosine deaminase deficiency, put of defective p47phox, sickle cell with HbS, beta-thalassaemia due to inadequate production of beta-haemoglobin, familial hypercholesterolaemia compensional pharmaceutical selectioncy, alphal-antitrypsin deficiency, contithine transcarbamylase deficiency, Paconi's anaemia, apolipoprotein E deficiency, haemophilia A and B due to factor VIII and IX deficiency, mutations, cystic fibrosis due to GFTR mutations, Parkinson due to tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage contineations, cystic fibrosis due to GFTR mutations, Parkinson due to tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage contibettion, acquired anaemia, cardiac and peripheral vascular disease infection, acquired anaemia, cardiac and peripheral vascular disease and arthritis. The present peptide sequence is histidine copolymer

Histidine copolymer; enzyme deficiency; phenylalanine hydroxylase; ornithine transcarbamylase; adenosine deaminase; tyrosine hydroxylase; purine nucleoside phosphorylase; alphal-antitrypsin; apolipoprotein E; chronic granulomatous disease; alphal-antitrypsin; apolipoprotein E; familial hypercholesterolaemia; low-density lipoprotein receptor; phenylketonuria; Faconi's anaemia; haemophilia; muscular dystrophy; cystic fibrosis; Parkinson's disease; retinitis pigmentosa; cytostatic; lysosomal storage disease; mycopolysaccharide type I disease; cardiant; diabetic retinopathy; human immunodeficiency virus disease; infection; cardiac disease; peripheral vascular disease; anthitis;
E deficiency, haemophilia A and B due to factor VIII and IX deficiency, muscular dystrophy due to dystrophin, laminin-2, or sacroglycans mustations, cystic fibrosis due to CFTR mutations, Parkinson due to tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storag disease (i.e., mycopolysaccharide type 1, Hunter, Hurler and Gaucher), diabetic retinopathy, human immunodeficiency virus disease, virus infection, acquired anaemia, cardiac and peripheral vascular disease and arthritis. The present peptide sequence is a histidine copolymer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pharmaceutical composition useful for delivering therapeutic agent for treating diseases, comprises a peptide characterized with specified number of amino acids and a specified percentage of histidine residues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a pharmaceutical agent delivery composition comprising a transport polymer comprising a linear or branched peptide having about 10 to 300 amino acid residues, having about 5 to 100% histidine residues, and optionally having 1 to 95% non-histidine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                       Length 21;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Indels

The present invention provides the protein and coding sequences of Haemophilus influenzae BVH-NTHI1-12. The sequences can be used in the production of a vaccine to protect against, and in the diagnosis of, H. influenzae infection, which can lead to otitis media, sinusitis, bronchitis, pneumonia, meniatis and bacteraemia. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The adhesin binds specifically to phosphatidylethanolamine, gangliotriaosyloeramide and supplicternasyloeramide. It can be purified from H. influenzae cells or from transformed host cells. Adhesin polypeptides or nucleic acid molecules (see ANV36489) encoding them can also be use in claimed immunogenic compositions formulated as vaccines to protect a mammal (preferably a human) against diseases caused by bacterial pathogens that have the adhesin as a surface protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Haemophilus influenzae adhesin protein – useful in vaccines against

patient is afflicted with overian cancer: The method involves comparing the expression level of a marker in a patient sample and the normal level of expression of the marker in a control non-ovarian cancer sample, where the marker is selected from 33 cancer markers described in the specification. The method of the invention is useful in diagnosing or characterising cancer, in detecting the presence of cancer as early as possible, and the recurrence of ovarian cancer. The method may also be particular use with patients having an enhanced risk of developing ovarian cancer (e.g. patients having a familial history of ovarian cancer?). The cancer markers may be used in the management and treatment of e.g. brain and central nervous system disorders (e.g. bacterial and viral meningitis Alzheimer's disease or Parkinson's disease), brain disorders (e.g. cerebral oedema, hydrocephalus or brain herniations), inflammations (e.g. bacterial or viral meningitis or encephalitis), central nervous system disorder; bacterial meningitis; viral meningitis; Alzheimer's disease; Parkinson's disease; cerebral oedema; hydrocephalus; Barain herniation; inflammation; encephalitis; testicular disorder; nontuberculous granulomatous orchitis; connective tissue disorder; heart disorder; ischaemic heart disease; atherosclerosis; neoplasm; histological type; carcinogenic; ovarian cancer marker. ovarian cancer; marker; cancer; familial history; brain disorder; Assessing whether a patient is afflicted with ovarian cancer, useful in assessing the stage or progression of the disease, comprises comparing or progression of the disease, comprises comparing I of a cancer marker in a sample from a patient and testicular disorders (e.g. nontuberculous granulomatous orchitis), connective tissue disorders, or heart disorders (e.g. ischaemic heart disease or atherosclerosis). The compositions and methods may also be used in assessing the histological type of neoplasm associated with The present invention relates to a new method for assessing whether Hoersch S, Kamatkar S, Kovatis SG; andt PJ, Sen A, Vieby PO, Mills GB; Zhao X, Glatt K; Disclosure; Page 378-381; 481pp; English. ovarian cancer, monitoring the progression of ovarian cancer, determining whether ovarian cancer has metastasized or is likely to metastasize, selecting a composition for inhibiting ovarian cancer, assessing the ovarian cancer optential of a compound, or inhibiting ovarian cancer or at risk of developing ovarian cancer represents one of the ovarian cancer markers described in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequence and an oligonucleotide comprising a sequence complementary to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human, primer; detection; diagnosis; antisense therapy; gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes primer sets for synthesising 5602 full-length CDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence the oligonucleotide comprises a 1-east 15 nucleotides and the complementary to a polynucleotide comprises at 1-east 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and
            detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAS. The primers allow obtaining of the full-length cDNAS easily without any specialised methods. AAM10316c to AAM13628 and AAM13633 to AAM18742 represent human enthous any sequences; AAM3546 to AAM35893 represent human amino acid sequences; and AAM13629 to AAM13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

This represents a human CIFISO/hTAFIIISO (CT) polypeptide that is conversed in mitosis and cell cycle progression. The CT protein conversed in mitosis and cell cycle progression. The CT protein correctly conversed in the CT protein plays a role in establishing gene expression conversed to patterns necessary for progression through the cell cycle. CT is a necessary transcriptional regulator of cell cycle progression through the cell cycle. CT is a converse on the used for affecting mitosis or cell cycle progression and treating disorders associated with alterations in mitosis correctly correctly correctly correctly disorders associated with alterations in mitosis correctly correctly correctly benefits and progression. Decreased CT gene expression can be used to creat conditions characterised by high rates of mitosis, such as conversed 
        in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13631 to AAH18742 represent human cDNA sequences; AAB92446 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent invention.
The primers are useful for synthesising polynucleotides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CIF150/hTAFI1150; mitosis; cell cycle progression; neoplasia; human;

                                                                                                                       1;
either in vitro, such as in a cell culture, or in vivo. The products can also be used for the diagnosis, prognosis and predicting susceptibility to neoplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is a human CIF150/hTAFI1150 protein which is required for a human cell to enter mitosis. In particular, CIF150/hTAFI1150 is an essential cofactor for TPIID-dependent transcription. CIF130 negatively requlates CIF150 thereby inhibiting mitosis or cell cycle progression. CIF150 has a CIF130-binding domain and is used to screen compounds that interfere with the binding of CIF130. CIF130 is used to diagnose and treat proliferative disorders including hyperplasias, neoplasias and dysplasias.

SEQUENCE 2, Application US/0868652BA

Patent No. 6054134

GENERAL INFORMATION:

TITLE OF INVENTION: HAEMOPHILUS ADHESIN PROTEIN
NUMBER OF SEQUENCES:

ADDRESSE: Burns, Doane, Swecker & Mathis, L.L.P.

STREET: 1737 King Street, Suite 500

CITY: Alexandria

STATE: Virginia

COUNTRY: United States

SIAPE: 2314-2756

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: PatentIn Release #1.0, Version #1.30

CURRENT APPLICATION DATE:

APPLICATION NUMBER: US/08/686,528A

FILING DATE: 26-ULL.1996

CLASSIFICATION NATE:

SALUL.1996

CLASSIFICATION NATE:

CLASSIFICATION SALUL.1906

i Sequence 2, Application US/09476482

patent No. 628456

GENERAL INFORMATION:
APPLICANT: Jones, Katherine A.
APPLICANT: Jones, Matherine A.
APPLICANT: Application US/09476482

APPLICANT: Ping
APPLICANT: Ping
APPLICANT: Pang, Shi.-Min
TITLE OF INVENTION: A TRANSCRIPTIONAL COACTIVATOR THAT
TITLE OF INVENTION: RNA, METHODS FOR MODULATING TAT TRANSACTIVATION, AND USES
TITLE OF INVENTION: TRANS. US/09/476,482

CURRENT APPLICATION NUMBER: US/09/126,980

EARLIER FILING DATE: 1999-12-30

EARLIER FILING DATE: 1998-07-30
                                                                                                                                                    Sequence 2, Application US/09126980
; Sequence 2, Application US/09126980
; Patent No. 6270956
; GENERAL INFORMATION:
    APPLICANT: Jones, Katherine
; APPLICANT: Garber, Mitchell
; APPLICANT: Fands, Shi-Min
; TITLE OF INVENTION: INTERACTS WITH TAT PROTEIN AND REGULATES ITS
; TITLE OF INVENTION: INTERACTS WITH TAT PROTEIN AND REGULATING TAT
; TITLE OF INVENTION: INTERACTS WITH TAT PROTEIN AND REGULATING TAT
; TITLE OF INVENTION: TRANSACTIVATION, AND USES THEREFOR
; FILE REFERENCE: SALK2231

DNA topoisomerase (EC 5.99.1.2) - human
N;Alternate names: nicking-closing enzyme; omega-protein; relaxing enzyme; swivelase; t;
C;Species: Homo sapiens (man)
C;Date: 30-Sep-1992 #sequence revision 30-Sep-1992 #text_change 18-Jun-1999
C;Accession: A30887; A40008; Si1821; S02397; S40643; A34422
R;D'Arpa, P.; Machlin, P.S.; Ratrie III, H.; Rothfield, N.F.; Cleveland, D.W.; Barnshaw A;Title: cDNA cloning of human DNA topoisomerase I: catalytic activity of a 67.7-kDa ca-A;Reference number: A30887; MUID:88190108; PMID:2833744
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A; Molecule type: mRNA

CARY OUT HIGH-1996) to the EMBL/GenBank/DDBJ databases.

CARY OUT HIGH-AFFINITY BINDING AND ENERGY DEPENDENT UPTAKE INTO THE PERIPLASMIC SPACE OF SPECIFIC SUBSTRATES. IT COULD ACT TO THE PERIPLASMIC SPACE OF SPECIFIC MEMBRANE TO SPECIFIC ENERGY-REQUIRING PROCESSES IN THE OTTOPLASMIC MEMBRANE, RESULTING IN THE RELASE INTO THE PERIPLASM OF LIGAMDS BOUND BY THESE OUTER MEMBRANE PROTEINS (BY SIMILARITY).

CI-SUBCELLIQUAR LOCATION: ANCHORED TO THE CYTOPLASMIC MEMBRANE VIA ITS N-TERMINAL SIGNAL-LIKE SEQUENCE, SPANS THE PERIPLASM (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MEDLINE-98150851, PubMed-9491887;

MISCELLANEOUS: EUVRAYOTIC TOPOISOMERASE I AND II CAN RELAX BOTH
NEGATIVE AND POSITIVE SUPERCOILS, WHEREAS PROKARYOTIC ENZYMES
RELAX ONLY NEGATIVE SUPERCOILS.
MISCELLANEOUS: WHEN A TOPOISOMERASE TRANSIENTLY BREAKS A DNA
BACKBONE BOND, IT SIMULTANEOUSLY FORMS A PROTEIN-DNA LINK, IN
WHICH A TYROSYL OXYGEN IN THE ENZYME IS JOINED TO A DNA PHOSPHORUS
AT ONE END OF THE ENZYME-SEVERED DNA STRAND.
SIMILARITY: BELONGS TO THE EUKARYOTIC TYPE I TOPOISOMERASE FAMILY.
                                                                                                                                                                                                                                                              VARIANT CPT-RESISTANT ALA-729.

SEQUENCE FROM N.A.

Hui C.F., Lo C.K., Hwang J.;

SUBMITTED BY TOPOISOMERASES LEADS TO THE SUBMITTED BY TOPOISOMERASES LEADS TO THE CONVERSION OF ONE TOPOLGGICAL ISOMER OF DNA TO ANOTHER.

- I- CATALYTIC ACTIVITY: ATP-independent breakage of single-stranded DNA, followed by passage and rejoining.

- I- SUBUNIT: Monomer.

- SUBUNIT: Monomer.

- WISCELLANEOUS: EUKARYOTIC TOPOISOMERASE I AND II CAN RELAX BOTH NEGALIVE AND POSITIVE SUPERCOILS.

- I- MISCELLANEOUS: WHEN A TOPOISOMERASE TRANSIENTLY BREAKS A DNA BACKBONE BOND, IT SIMULTANEOUSLY FORMS A PROTEIN-DNA LINK, IN WHICH A TYROSYL OXYGEN IN THE ENZYME IS JOINED TO A DNA PHOSPHORUS COME AT ONE END OF THE ENZYME IS JOINED TO A DNA PHOSPHORUS COME AT ONE END OF THE ENZYME IS TRAND.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This SWISS-PROT entry is copyright. The invention relates to a pharmaceutical agent delivery composition comprising a transport polymer comprising a linear or branched peptide comprising a transport polymer comprising a linear or branched peptide having about 10 to 300 amino acid residues, having about 5 to 100% histidine residues, and optionally having 10 95% non-histidine listed to be a least one pharmaceutical agent and optionally one or more intracellular delivery composition is useful for cellivering a pharmaceutical agent to the interior of a cell and is be a pharmaceutical agent to the interior of a cell and is cellivering a pharmaceutical agent to the interior of a cell and is considered bhosphorylase deficiency, chronic granulomatous disease with nucleoside phosphorylase deficiency, chronic granulomatous disease with condequate production of beta-hamengolobin, familial hypercholesterolaemia due to a defective payphox, sackle cell with HbS, beta-thalassaemia due to confithine transcarbamylase deficiency, raconi's anaemia, apolipoprocein confithine transcarbamylase deficiency, raconi's anaemia, apolipoprocein confithine transcarbamylase deficiency, raconi's anaemia, apolipoprocein confithine dystrophial and B due to factor VIII and IX deficiency, muscular dystrophin, laminin-2, or sacroalycans cutations, cystic fibrosis due to CFTR mutations, parkingon due to tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage cyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage confidencial cretinopathy, human immundeficiency virus disease, virus in HH-K2b, HH-K3b and HHK4b polymers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Enzyme deficiency; phenylalanine hydroxylase; ornithine transcarbamylase; adenosine deaminase; tyrosine hydroxylase; purine nucleoside phosphorylase; alphal-antitrypsin; apolipoprotein E; chronic granulomatous disease; sickle cell; beta-thalassasemia; anaemia; familial hypercholesteroleamia; low-density lipoprotein receptor; phenylketonuria; Faconi's anaemia; haemophilia; muscular dystrophy;
                                                                                                                                                                                                                                                                                                                                                                                                                           pharmaceutical composition useful for delivering therapeutic agent for treating diseases, comprises a peptide characterized with specified number of amino acids and a specified percentage of histidine residues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 136; DB 22;

                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a pharmaceutical agent delivery composition comprising a transport polymer comprising a linear or branched peptide having about 10 to 300 amino acid residues, having about 5 to 100% having about 10 to 300 amino acid residues, having about 5 to 100% having about 10 to 300 amino acid residues, having 1 to 95% non-histidine residues, at least one pharmaceutical agent and optionally one or more intracellular delivery components in association with the transport colymer. The pharmaceutical agent delivery composition is useful for delivering a pharmaceutical agent to the interior of a cell and is used in gene therapy for treating adenosine deaminase deficiency, purine cuclosside phosphorylase deficiency, chronic granulomatous disease with necessity and the HBS, beta-thalassaemia due to inadequate production of beta-hemoglobin, familial hypercholesterolaemia cor a defective low-density lipoprotein receptor, phenylkecountia due to a defective low-density lipoprotein receptor, phenylkecountia due to phenylalanine hydroxylase deficiency, Paconi's anaemia, apolipoprotein cor phenylalania dystrophida de to factor VIII and IX deficiency, muscular dystrophida due to dystrophin, laminin-2, or sacroglycans cuscular dystrophida due to GTR mutations, cystic fibrosis due to GTR mutations, Parkinson due to tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage confisease (i.e., mycopolysaccharide type I, Hunter, Hurler and Gaucher), diabetic retinopathy, human immunodeficiency virus disease, virus infection, acquired anaemia, cardiac and peripheral vascular disease infection, acquired anaemia, cardiac and peripheral vascular disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Enzyme deficiency; phenylalanine hydroxylase; cornithine transcarbamylase; adenosine deaminase; tyrosine hydroxylase; purine nucleoside phosphorylase; alphal-antitrypsin; apolipoprotein E; chronic granulomatous disease; sickle cell; beta-thalassaemia; anaemia; familial hypercholesterolaemia; low-density lipoprotein receptor; phenylketohuria; Faconi's anaemia; haemophilia; muscular dystrophy; cystic fibrosis; parkinson's disease; retinitis pigmentosa; cytostatic; lysosomal storage disease; mycopolysaccharide type I disease; cardiant; diabetic retinopathy; human immundeficiency virus disease; infection; cardiac disease; peripheral vascular disease; antisickling; arthritis; nootropic; haemostatic; virucide; gene therapy.
                                                                                                                                                                                            Pharmaceutical composition useful for delivering therapeutic agent for treating diseases, comprises a peptide characterized with specified number of amino acids and a specified percentage of histidine residues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

The invention relates to a pharmaceutical agent delivery composition comprising a transport polymer comprising a linear or branched peptide having about 1 to to 300 amino acid residues, having about 5 to 100% thistidine residues, and optionally having 1 to 95% non-histidine residues, and optionally having 1 to 95% non-histidine intracellular delivery components in association with the transport polymer. The pharmaceutical agent delivery composition is useful for delivering a pharmaceutical agent delivery composition is useful for used in gene therapy for treating adenosine deaminase deficiency, purine uncleoside phosphorylase deficiency, chronic granulomatous disease with defective p47phox, sickle cell with HbS, beta-thalassaemia due to inadequate production of beta-haemoglobin, familial hypercholesterolaemia contithine transcarbamylase deficiency, alphal-antitrypsin deficiency, ornithine transcarbamylase deficiency, alphal-antitrypsin deficiency, contithine transcarbamylase deficiency, alphal-antitrypsin deficiency, muscular dystrophy due to dystrophin, laminn-2, or sacroglycans chieses (i.e., mycopolysaccharide type 1, Hunter, Hurlar and Gaucher), diabetic retinopathy, human immunodeficiency virus disease, virus infection, acquired anaemia, cardiac and peripheral vascular disease infection, acquired anaemia, cardiac and peripheral vascular disease
cystic fibrosis; Parkinson's disease; retinitis pigmentosa; cytostatic;
                      lysosomal storage disease, mycopolysaccharide type I disease; cardiant; diabetic retinopathy; human immunodeficiency virus disease; infection; cardiac disease; peripheral vascular disease; antisickling; arthritis;

Pharmaceutical composition useful for delivering therapeutic agent for treating diseases, comprises a peptide characterized with specified number of amino acids and a specified percentage of histidine residues

Example; Page 23; 64pp; English.

The invention relates to a pharmaceutical agent delivery composition comprising a transport polymer comprising a linear or branched peptide comprising a transport polymer comprising a linear or branched peptide having about 10 to 300 amino acid residues, having about 5 to 100% institution residues, and optionally having 1 to 95% non-histidine measured to the pharmaceutical agent and optionally one or more contracellular delivery components in association with the transport of polymer. The pharmaceutical agent delivery composition is useful for delivering a pharmaceutical agent delivery composition is useful for used in gene therapy for treating adenosine deaminase deficiency, purine conclosate production of beta-hemoglobin, familial hypercholesterolaemia continue production of beta-hemoglobin, familial hypercholesterolaemia due to a defective low-density lipoprotein reseptor, phenylkeronuria due continine transcarbamylase deficiency, alphal-antitrypsin deficiency, continine transcarbamylase deficiency, panhal-antitrypsin deficiency, muscular dystrophilia A and B due to factor VIII and IX deficiency, muscular dystrophilia A and B due to factor VIII and IX deficiency, contininal dystrophilia A and B due to factor VIII and IX deficiency, muscular dystrophylase deficiency, retinitis pigmentosa, lysosomal storage cyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage cyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage cyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage confisease (i.e., mycopolysaccharide type 1, Hunter, Hurler, Hurler, diaberic retinopathy, human immunodeficiency virus disease, virus infection, acquired anaemia, cardiac and peripheral vascular disease infection, acquired enaemia, cardiac and peripheral vascular disease.

Pharmaceutical composition useful for delivering therapeutic agent for treating diseases, comprises a peptide characterized with specified number of amino acids and a specified percentage of histidine residues

Example; Page 23; 64pp; English.

The invention relates to a pharmaceutical agent delivery composition comprising a transport polymer comprising a linear or branched peptide comprising a transport polymer comprising a linear or branched peptide comprising about 5 to 100% and optionally having 1 to 95% non-histidine residues, and optionally having 1 to 95% non-histidine calcius, at least one pharmaceutical agent and optionally one or more residues, at least one pharmaceutical agent delivery composition with the transport composition with the transport conjumer. The pharmaceutical agent delivery composition is useful for delivering a pharmaceutical agent delivery composition is useful for concleoside phosphorylase deficiency, chronic granulomatous disease with confective p47phox, sickle cell with HbS, beta-thalasseemia due to defective p47phox, sickle cell with HbS, beta-thalasseemia due to confective p47phox, sickle cell with HbS, beta-thalasseemia due to confective p47phox, sickle cell with HbS, beta-thalasseemia due to confective p47phox, alckle cell with HbS, beta-thalasseemia due to confective p47phox, alckle cell with HbS, beta-thalasseemia due to confective p47phox, alckle cell with HbS, beta-thalasseemia due to confective p47phox, alckle cell with HbS, beta-thalasseemia due to confective p47phox, alckle cell with HbS, beta-thalasseemia due to conferince confective p47phox, alckle celloncy, Faconi's anaemia, apolipoprotein confectioncy, hemosphila A and B due to factor VIII and IX deficiency, muscular dystrophy due to dystrophin, laminin-2, or sacroglycans containe hydroxylase deficiency, retinitis pigmentosa, lysosomal storage tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage

inadequate production of beta-haemoglobin, familial hypercholesterolaemia
             due to a defective low-density lipoprotein receptor, phenylketonuria due to phenylalanine hydroxylase deficiency, alphal-antitrypsin deficiency, ornithine transcarbamylase deficiency, Faconi's anaemia, apolipoprotein E deficiency, haemophilia A and B due to factor VIII and IX deficiency, muscular dystrophy due to dystrophin, laminin-2, or sacrodycans mutations, cystic fibrosis due to CFTR mutations, Parkinson due to tyrosine hydroxylase deficiency, retinitis pigmentosa, lysosomal storage disease (i.e., mycopolysaccharide type 1, Hunter, Hurler and Gaucher), diabetic retinopathy, human immunodeficiency virus disease, virus infection, acquired anaemia, cardiac and peripheral vascular disease and arthritis. The present peptide sequence is a histidine copolymer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01875) and the encoded proteins
                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                developmental biology; cell signalling; insecticide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to isolated polymuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags polymucleotides acrivity of (II) or to treat disease states involving to respect the polymer of (II) and its useful for generating antibodies against it, detecting or (II). (II) is useful for generating antibodies against it, detecting or supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating imaging of sites expressing (II). (I) and (II) are useful for treating clisorders involving aberrant protein espression or biological activity. The proposible for genetic disorders or other traits to assess biodiversity responsible for genetic disorders or other traits to assess biodiversity amino acid sequence other types of data and products dependent on DNA and amino acid sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from MIPO at fire, wipo.int/pub/published_pct_sequences.

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins

The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult
liver, comprising one of 13109 defined nucleotide sequences given in the
specification (or complements/ fragments). The probe hybridises at high
stringency to a nucleic acid molecule expressed in the human adult
liver. (I) may be used for predicting, measuring and displaying gene
cxpression in samples derived from human adult liver. The genes
cidentified may be involved in genetic liver diseases such as cirrhosis,
hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which
is associated with coronary heart disease. ABG47348-ABG59930 represent
human liver single exon encoded peptides of the invention.
Note: The sequence information for this patent does not appear in the
printed specification but was obtained in electronic format directly
from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Peptide #4697 encoded by breast cell single exon nucleic acid probe.
                                                                                                                                                                                                                                                                                                                                                 Human genome-derived single exon nucleic acid probes useful for analysing gene expression in human adult liver -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         solated nucleic acid detection reagent for detecting 1000 or more from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; liver; cirrhosis; hyperlipoproteinaemia; hyperlipidaemia; hypercholesterolaemia; coronary heart disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ଟ
                                                                                                                                                                                                                                                                                               The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias diversity of probes for measuring gene expression, with far less bias than expressed sequence tay microarrays. The method is sultable for rapid production of functional information from genomic sequence. The probes are presents expensed acid as peptide encoded by a single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; foetal liver; gene expression; single exon nucleic acid probe.
                                                                                                                                                                                              New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast, comprises number of single exon nucleic acid probes -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Protein #4583 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                               The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21353-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/published_pct_sequences.
                        Claim 15; SEQ ID No 24354; 530pp; English.

Batent No. 6562958

GENERAL INFORMATION:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER

TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION NUMBER: US/09/328,352

CURRENT FILING DATE: 1999-06-04

SEQ ID NOS: 8252

LENGTH: 363
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
